

A-Series Miniature Explosion Proof Pressure Switches

Ashcroft® A-Series miniature explosion proof pressure switches are designed for tough applications where conventional pressure switch designs often don't measure up.

A rugged all 316 SS IP67 enclosure gives uncompromising protection over a wide temperature range for the most demanding hazardous area applications.

FEATURES:

- Compact size
- 316 stainless steel construction
- Pressure ranges from vacuum to 7500 psi
- Field adjustable setpoint or factory set only
- Wide operating temperature range (-40° to 89°C) max.
- Hermetically sealed micro-switch
- Precision snap-acting micro switch element
- SPDT or DPDT switching
- CSA listed
- UL listed
- FM approved
- Atex & IECEx
- SIL 3 capable
- CRN
- Dual seal rated
- CE and ROHS compliant

Applications include:

Oil and gas industry

- Offshore oil rigs
- Oil & Gas Production
- Oil Pipelines
- Gas Transmission/Distribution Systems
- Refineries (where 316 stainless steel construction and small size is desirable)

Chemical and petrochemical plants

- Process Industries
- Process Gas
- Pumps, Compressors & Turbines (where small size and corrosion resistance construction is important)

Other special machinery and equipment applications

- where small size and high performance are desirable

A rugged 316 SS enclosure gives uncompromising protection. Materials of construction have been selected for long life. Precision snap acting micro switches are featured and fully encased to prevent moisture from corroding switch contacts.

The switch, depending on range, is either an all welded 316 stainless steel diaphragm sealed piston design or a direct acting piston design sealed with a Buna-N or Viton O-ring.

A-Series Miniature Explosion Proof Pressure Switches

SELECTION GUIDE

Before selecting a switch model the following should be considered:

Actuator:

The actuator responds to changes in pressure and operates the micro switch element in response to these changes. The actuator is normally exposed to the process media and must be chemically compatible with it. There are three types of actuators available for the A-Series switches – all welded 316 SS diaphragm sealed piston; 316 SS piston with Viton O-ring seal; and 316 SS piston with Buna-N O-ring seal. The 316 SS diaphragm is available in ranges from -15/15 psi to 200 psi. The 316 SS piston is available in ranges from 100 psi to 7,500 psi. Switches offered in 100 psi and 200 psi can be ordered with either the piston or diaphragm design. The piston design will have a longer mechanical life, while the diaphragm design has a better operating temperature.

The piston design is more reliable than a diaphragm design when subjected to frequent large pressure excursions, pressure surges and spikes associated with typical hydraulic applications. Piston designs are typically used when the switch is used as low pressure alarm or cutoff where the normal working pressure is above the nominal range of the switch.

The Switching Function:

Most applications for alarm, shutdown and interlock are satisfied by the standard A-Series switches which feature single setpoint fixed deadband. For pump, compressor and other control applications, the dead-band becomes a very important consideration and may require

increasing the range of the switch to increase the deadband. Please consult your Ashcroft representative for assistance with special applications.

The Micro Switch Element:

The micro switch element must be chosen to meet the electrical load requirement to be switched. The switches are offered as either SPDT (single pole double throw) or DPDT (double pole double throw). The DPDT switch is made up of two SPDT switches which are adjusted to work together by Ashcroft's patent pending Circuit Board Rotation Design. DPDT switching is not available on diaphragm designs below 100 psi.

Understanding Setpoints and Reset Points:

Pressure switches can be set to switch on either increasing (rising) or decreasing pressures. Since the switches have both Normally Open (NO) contacts and Normally Closed (NC) contacts you can wire the switch to open or close for either an increasing or decreasing pressure. To be consistent in setting the switches Ashcroft defines the setpoints as follows. For an increasing setpoint, the pressure is increased from 0 psi to the set point and then decreased to the reset point. For a decreasing setpoint, the pressure is increased to full range and then decreased to the setpoint and then increased to the reset point.

Custom Applications:

The A-series switch is designed to allow custom process connections. Please consult your Ashcroft representative for assistance with custom applications.

AVAILABLE ELECTRICAL CONNECTIONS

1/2 NPT CONDUIT
CONNECTOR WITH
18 AWG WIRE LEADS

AVAILABLE PRESSURE CONNECTIONS

1/8 or 1/4 MALE NPT

1/8 or 1/4 FEMALE NPT

VCR or VCO

7/16 ~-20 SAE

3/4", 1.5" or 2.0"
SANITARY

SPECIFICATIONS:

- Setpoint:** Factory set or field adjustable
- Setpoint repeatability:** ±2% of range
(Additional setpoint shift of ±2% of range per 40°F from initial setpoint set at 70°F typical)
- Vibration:** Passed MIL-STD-202G
- Shock:** 75G's 10 milliseconds 3 axis
- Piston:** Stainless steel with Viton or Buna-N O-ring
- Mechanical life piston design:** >1,000,000 operations typical
- Diaphragm:** 316L SS
- Mechanical life diaphragm design:** >400,000 operations typical
- Enclosure material:** 316L SS
- Enclosure rating:** NEMA 4X, 7, 9, IP 67
- Pressure connection:** 1/2 NPTF, 1/4 NPTF, 1/4 NPTM, 1/4 NPTM, 7/16-20 SAE M, VCR, VCO, 3/4" Tri-Clamp®, 1.5" Tri-Clover®, 2.0" Tri-Clover®, G1/4 B, G1/4 A Type E Stub end
- Electrical output:** SPDT, or DPDT 5A or 3A 120Vac, 2A @ 30 Vdc, 5A @ 28 Vac, gold contacts available
- Electrical termination:** 18 AWG wire leads, with 1/2 NPT conduit connection.

8 – SETPOINT	
5 characters maximum representing setpoint of the switch in the same units as the range of the switch. For setpoints in Vacuum specify as “-”pressure.	
9 – SETPOINT DIRECTION	
Code	
R	Rising Pressure (Increasing Pressure, Decreasing Vacuum)
D	Decreasing Pressure, Increasing Vacuum

10 – OPTIONS	
Code	Description
XC4	Individual certified calibration chart
XFP	Fungus proofing
XMQ	Positive Material Identification (75, 15 & 20 process conn. only)
XNC	2 wire leads + ground wire – wired for normally closed operation
XNO	2 wire leads + ground wire – wired for normally open operation
XNH	Stainless Steel Tag
XNN	Paper Tag
X6B	Cleaned for Oxygen service
XGO	Ground Wire Omitted
XUV	Unvented, not dual seal rated (APA version only)

HOW TO ORDER:

A-Series Part Number: **APS** **N7** **1H** **012C** **S** **02** **30# - 15 R - X6B**

PRESSURE CONNECTION NOTES

* Available with “S” activator only.

† Ranges ≤ 500 psi.

SETPOINT NOTES

If no setpoint is required on an APA switch use either “NSR” or “NSD”. If direction is not known use “NSR” as the default.

OPTIONS NOTES

The X character will only appear before the first option, additional options will just be the two characters. Example: XC4NC6B

If the switch is mounted to a diaphragm seal other than (75, 15, 20 connection) the seal fill fluid is also listed as an X option.

A-Series Miniature Explosion Proof Pressure Switches

ADDITIONAL SWITCH TERMINOLOGY

Accuracy – (See repeatability) Accuracy normally refers to conformity of an indicated value to an accepted standard value. There is no indication in switch products; thus, instead, the term repeatability is used as the key performance measure. Ashcroft A-Series switch accuracy is 2% of nominal range.

Automatic Reset Switch – Switch which returns to normal state when actuating variable Pressure is reduced.

Adjustable or Operating Range – That part of the nominal range over which the switch setpoint may be adjusted. Normally about 10% to 100% of the nominal range for A-Series pressure switches.

Burst Pressure – The maximum pressure that may be applied to a pressure switch without causing leakage or rupture. This is approximately 16X of nominal range for A-Series switches. Diaphragm switches subjected to pressures above the nominal range can be permanently damaged.

Deadband – The difference between the setpoint and the resetpoint, normally expressed in units of the actuating variable. Sometimes referred to as differential.

Fixed Deadband – The difference between the setpoint and the resetpoint of a pressure switch. It further signifies that this deadband is a fixed function of the pressure switch and not adjustable.

National Electrical Manufacturers Association (NEMA) – This group has defined several categories of enclosures, usually referred to as “types.” Further, they designate certain features and capabilities each type must include.

NEMA 6 – Enclosures constructed for either indoor or outdoor use to provide a degree of protection to personnel against access to hazardous parts; to provide a degree of protection of the equipment inside the enclosure against ingress of solid foreign objects (falling dirt); to provide a degree of protection with respect to harmful effects on the equipment due to the ingress of water (hose directed water and the entry of water during occasional temporary submersion at a limited depth); and that will be undamaged by the external formation of ice on the enclosure.

Normal Switch Position – Contact position before actuating pressure (or variable) is applied.

Normally closed contacts open when the switch is actuated. Normally open contacts close when the switch is actuated.

Normally Closed – Refers to switch contacts that are closed in the normal switch state or position (unactuated). A pressure change opens the contacts.

Normally Open Switch – Refers to the contacts that are open in the normal switch state or position (unactuated). A pressure change closes the contacts.

Overpressure Rating(s) – A nonspecific term that could refer to either burst or proof pressure, or both.

Proof Pressure – The maximum pressure which may be applied without causing damage. This is determined under strict laboratory conditions including controlled rate of change and temperature: This value is for reference only. Consult factory for applications where switch must operate at pressures above nominal range or reference temperature (70°F).

Repeatability (Accuracy) – The closeness of agreement among a number of consecutive measurements of the output setpoint for the same value of the input under the same operating conditions, approaching from the same direction, for full-range traverses. Ashcroft A-series switch repeatability is 2% of nominal range.

Note: It is usually measured as non-repeatability and expressed as repeatability in percent of span or nominal range. It does not include hysteresis or deadband.

Resetpoint – The resetpoint is the Pressure value where the electrical switch contacts will return to their original or normal position after the switch has activated.

Setpoint – The setpoint is the Pressure value at which the electrical circuit of a switch will change state or actuate. It should be specified either on increase or decrease of that variable.

Single Pole Double Throw (SPDT) Switching Element – A SPDT switching element has one normally open, one normally closed, and one common terminal. The switch can be wired with the circuit either normally open (N/O) or normally closed (N/C). SPDT is standard with A-series switches.

Double Pole Double Throw (DPDT) Switching Element – Two SPDT switching elements both set to actuate or de-actuate at the same set or resetpoint. Each switch one has one normally open, one normally closed, and one common terminal. The switches are independent of each other and can be wired to two independent circuits. The two circuits can either normally open (N/O) or normally closed (N/C).

Snap Action – In switch terminology, snap action generally refers to the action of contacts in the switch element. These contacts open and close quickly and snap closed with sufficient pressure to firmly establish an electrical circuit. The term distinguishes products from mercury bottle types that were subject to vibration problems.
